ANALYST REVIEW REQUIRED — decision support only; not a rating, not a probability of default, not a lending decision.

Amounts in USD millions unless stated. Every number is inserted from the deterministic engines and cited in brackets; the appendix gives each source.

Executive assessment

After the facility, net debt / EBITDA would be 12.20x, against 11.59x before it, with EBITDA / interest at 1.05x.[1–3] The next-FY accounting-stress screen is 80.8%, in the high band.[4–5] The downside case breaches the maximum net debt / EBITDA covenant of 3.50x by 11.76x.[6–7] Figures come from SEC 10-K XBRL filings; the memo supports analyst judgement and makes no lending decision.[8]

Financial profile

Revenue was USD 1,829m, down 5.4% year on year.[9–10] EBITDA, approximated as operating income plus depreciation and amortization, was USD 163m, a margin of 8.9%, against -5.6% a year earlier.[11–13] Operating cash flow of USD 101m covered capital expenditure of USD 30.6m, leaving simple free cash flow of USD 70.7m.[14–16] Gross debt stood at USD 1,950m and cash at USD 56.3m, for net debt of USD 1,894m.[17–19] Net debt / EBITDA was 11.59x and EBITDA / interest 1.09x.[2, 20] For the credit ratios the filing figures were adjusted to income-statement interest expense; the appendix gives each rule.[21]

Key strengths

The business generated positive free cash flow of USD 70.7m.[16] Liquidity is solid, with a current ratio of 3.32x.[22]

Key risks

Leverage is high, with net debt / EBITDA of 11.59x.[2] Interest cover is thin, with EBITDA / interest of 1.09x.[20] Revenue fell 5.4% year on year.[10] Some inputs were derived or approximated (3 data warnings); see the evidence appendix.[23]

Neural stress screen

The neural stress screen puts the chance that next year's accounts show financial stress at 80.8%, in the high screening band.[4–5] The largest contributions came from stress tests already failed this year (raising the score) and net debt to EBITDA (raising the score).[24–25] On held-out years the model reached a precision-recall AUC of 0.805, against 0.825 for an XGBoost benchmark.[26–27] The screen is an indicator of accounting stress, not of default, and is one input to analyst judgement.

Stress cases

In the base case gross debt rises to USD 2,050m and net debt / EBITDA is 12.20x, with EBITDA / interest at 1.05x.[1, 3, 28] In the downside case (EBITDA -20%, rates +200 bp) net debt / EBITDA reaches 15.26x and EBITDA / interest is 0.83x.[29–31] In the severe case (EBITDA -35%, rates +400 bp) net debt / EBITDA reaches

18.78x and EBITDA / interest is 0.67x.[32–34] In the analyst's own case (EBITDA -10%, rates +100 bp) net debt / EBITDA is 13.56x and EBITDA / interest is 0.94x.[35–37] Proceeds spent on capex or acquisitions are assumed to add no EBITDA.

Headroom is the distance to the covenant limit; a breach shows the shortfall.

Covenant headroom

Against a maximum net debt / EBITDA of 3.50x, the covenant is breached even in the base case, by 8.70x, and by 11.76x in the downside.[6–7, 38] In the analyst's own case the covenant is breached by 10.06x.[39] Against a minimum EBITDA / interest of 3.00x, the covenant is breached even in the base case, by 1.95x, and by 2.17x in the downside.[40–42] In the analyst's own case the covenant is breached by 2.06x.[43]

Diligence questions

Is a maximum net debt / EBITDA covenant of 3.50x appropriate given the downside headroom?[6] How much of the existing debt is floating-rate, and is it hedged? Does operating income include one-off items that an adjusted EBITDA would remove? Close the data gaps listed in the appendix before committee.
